Our Mission

Our mission is to raise money to support research and development to help cure Cystic Fibrosis (CF). 95% of our profits will go to the Canadian Cystic Fibrosis Foundation (www.ccff.ca). The other 5% of our profits will go directly back into whatever amateur sporting group we are taking photographs for. So, not only are we helping to find new treatments and cures for CF but we're trying to support our local youth leagues as well.

Our daughter, who is featured on the front cover, was born in 2002 and has CF. It is a deadly genetic disorder that severely limits the lifespan of people with CF. Since the 1960s, there has been a great amount of progress in the treatment of CF and it has caused the average lifespan to rise from 4 years to 37 years.

In 1989, it was a team of Canadian researchers that discovered the gene responsible for CF and there have been many exciting developments since then. With more research, a cure can be found. Thank you for helping us in our cause.
